## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-3, drawn to method of testing adhesion between film and substrate including subjecting film to insonification pressure and determining maximum instantaneous erosion pressure based on plot of erosion time vs. insonification pressure, classified in class 73, subclass 827.
- II. Claim 4, drawn to method of determining endurance limit under cyclic loading of a film on a substrate including subjecting film to variations in level of insonification pressure, classified in class 73, subclass 799.
- III. Claims 5-7, drawn to apparatus testing film adherence to substrate including test bed supporting substrate position and timer, classified in class 73, subclass 799+.

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because combination does not require

variations in pressure level. The subcombination has separate utility such as determining endurance limit.

Inventions I, II and III are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the methods do not require test bed supporting the substrate.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II and the search required for Groups I or II is not required for Group III, restriction for examination purposes as indicated is proper.
